# Link Storages : Dynamic Lookup Tables

- **What is a link storage?**

A built-in feature to store and retrieve cross-system key pairs (e.g., ERP Customer No ↔ CRM Account ID) inside Rapidi's own database.

- **How it works:**

- You define a code (e.g., CUST, ITEM), left/right descriptions, and key fields;
- At runtime, Rapidi automatically reads, writes, and updates the stored links;
- Works bidirectionally (e.g ERP → CRM and CRM → ERP);
- If Table Link is left empty on a Transfer, Rapidi uses Link Storage to create/update records.

**LSLookup function:** Lets you retrieve Link Storage values in other transfers - faster than a DBLookup against the live system.

**Runtime statistics:** After each run, Rapidi logs how many values were fetched, checked, updated, and added (plus execution time).
